

E-COMMERCE MODULE

MAGENTO 2.x

Chronopost module version 2.3.2

FOREWORD

Version after version, we make every effort to provide you with strong, intuitive shipping solutions offering a wider range of functions.

The new module (version 2.3.2) has new offers and integrates the PHP 8 version and ensures compatibility with Magento 2.4.8.

We hope that you will find everything you need in this guide.

The Chronopost team

WARNING

Our modules are designed so that you can update a previous version openly.

However, to avoid any inconvenience, we recommend that you test the new module on a pre-production platform if you have one.

Also remember to finalise all orders before installation

PRE-REQUISITES

Magento version

The module is designed to be compatible with all of the current versions of **Magento 2 Community Edition**. We strive to ensure upward compatibility of all Magento updates.

Contract

Since the 1.1.3 version of the Chronopost module, a test contract is pre-configured in the module installation, to allow you to test the module and check if it is suitable.

However a valid transport label can only be issued if a contract has been made with Chronopost.

If you do not have a Chronopost contract, you can request that someone contacts you by clicking [here](#) and by completing the form, stating that you are an e-tailer and wish to use the MyChrono pack.

To contact a Chronopost salesperson, go to :
<https://www.chronopost.fr/fr/professionnel/nous-contacter>

Responsibility

As this is a free (open-source) add-on module that can be modified and adapted to your needs, Chronopost cannot be held responsible for any technical problem related to the installation or adaptation of the add-on module on your site.

Consequently, you remain liable for any damage or loss, including loss of profits, affecting your equipment, materials, installations, supplies related to the use of the module.

In addition, you will be responsible for any damage or loss caused by you or your service providers on your site

Server configuration

We recommend that you use Php 5.5 or higher, and MySql 5.6 or higher data base.

Data flow authorisations

The Chronopost e-commerce module communicates with our systems to identify the offer prices and to provide and recover the information required for you to ship.

To accomplish this, we need your provider to authorise data flows to and from www.chronopost.fr.

- Chronopost IP: 10.34.36.170
- Port 8080

In most cases, this is already done and requires no action on your behalf. However, if you experience difficulties when configuring your module, such as not being able to verify your identifiers, please contact your service provider to ensure that this has been done or request it otherwise

NEW FUNCTIONS

Version 2.3.2

- Compatibility with Magento 2.4.8
- Order status update upon parcel delivery
- Fixed an issue with Chronorelais method detection that could allow order validation without selecting a pickup point.
- Return label printing now respects the configured print mode.
- Return labels in PDF format are now sent via email.

Version 2.3.0

- Compatibility Magento 2.4.7
- Minimum PHP compatibility upgrade: from PHP 7.0 to 7.1
- WebServices update
- The contract is now automatically pre-selected in the printing interface, based on the store where the order was placed.
- Return labels are now generated from the contract linked to the order, rather than from the one specified in the delivery method.

Version 2.2.0

- Add offers : 2Shop Retour, 2Shop Europe and 2Shop Retour Europe
- PHP 8 update and compatibility Magento 2.4.4

Version 2.1.0

- Add 2Shop Direct Offer
- Corrections for page builder

Version 2.0.0

- Support for ChronoFresh contracts
- Management of ChronoFresh, Temperate, Fresh and Freeze offers

Version 1.2.8

- Improved functionality for printing bulk parcel letters (it is no longer necessary to generate parcel letters on an order-by-order basis).
- New option to exclude automatic lockers for delivery to a relay point.
- Add of Chrono Relais DOM offer
- Add of management of manual tariff bands by country.
- Add of e-label function (Return sender without waybill)
- Improved management of shipper returns (reissue, cancellation, etc.)
- Support for shops in grams.
- New option to modify the insured value before shipment.
- New option for selecting the Saturday delivery option by the customer.

Version 1.1.5

- Bugfix of displaying Chronopost menu in the back office

Version 1.1.4

- Replacing the map provider for relay point display for simpler and more robust configuration.
- Added the Corsican supplement option.

Version 1.1.3

- Managing/modifying the weights and dimensions of the packages before printing the transport labels.
 - An update of multi-parcel shipments (parcel 1/x and no longer n times 1/1).
 - Introduction of multiple accounts, so that you can operate several contracts on a same e-commerce site.
 - Pre-setting of module parameters with an account and demonstration addresses.
 - An updated import function that now allows you to show the correspondence between the columns of your import file.
 - Sunday delivery is now managed (in Chrono Precise).
 - Extension of the Europe Return offer to all eligible countries and offers.
 - Handling of the translation of information from relay maps.
-

Fuller details of these functions will be provided in the presentation of the configuration of the module. Please refer to the relevant chapter for more information.

INSTALLING THE MODULE

Downloading

By the time you read this, our module is probably already available on Magento Marketplace. If you have an account, you can download it directly from marketplace.magento.com.

You can also download it directly from Chronopost.fr by [clicking here](#), or by visiting: www.chronopost.fr/fr/plateformes-e-commerce

Automatic installation of the module from Magento Marketplace

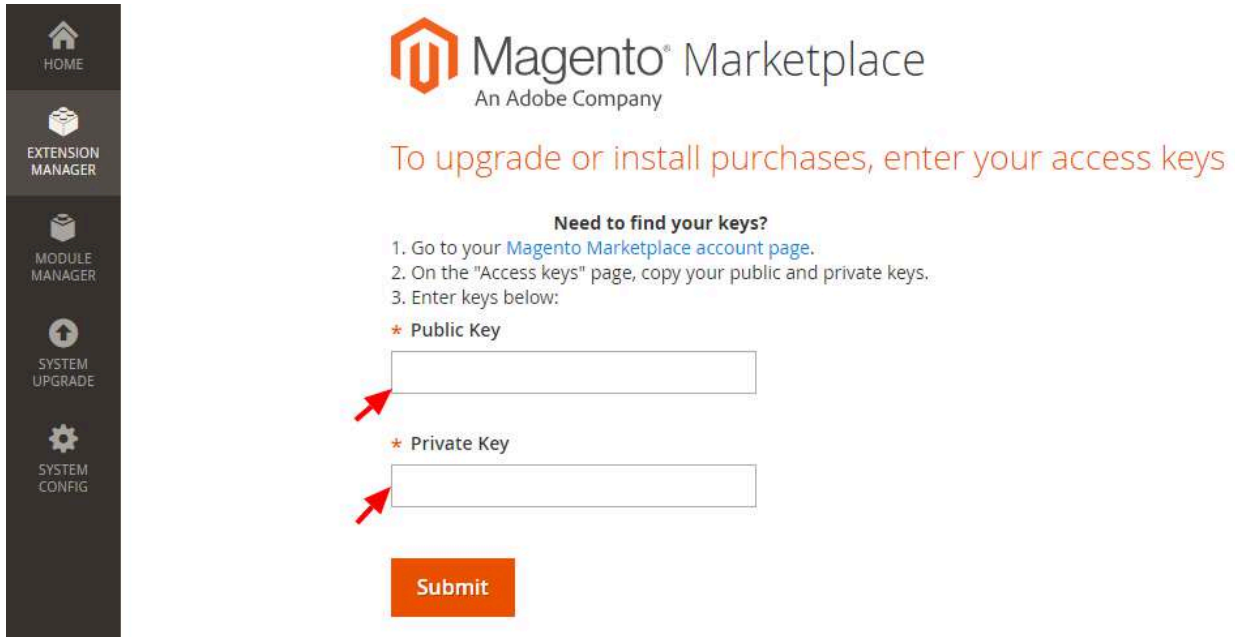

If you have a Magento Marketplace account, you can link your store to it so that you are able to install extensions in just a few clicks.

The connection with Magento Marketplace and the installation of a first module are a little painstaking but once completed, all of your other modules will be easy to install and the updates will be done automatically.

To do so, go to marketplace.magento.com and access the page “My Profile” and click on “Access Keys”.

Make a note of your public and private access keys, or create them if you haven't already done so.

HOME

EXTENSION MANAGER

SYSTEM CONFIG

 **Magento® Marketplace**
An Adobe Company

To upgrade or install purchases, enter your access keys

Need to find your keys?

1. Go to your [Magento Marketplace account page](#).
2. On the "Access keys" page, copy your public and private keys.
3. Enter keys below:

* Public Key

* Private Key

Submit

If you have not already done so, go to marketplace.magento.com and purchase the Chronopost module. Don't worry, the module is free, but you need to add it to your personal modules so that you can install it.

If you have already "purchased" it, go to <https://marketplace.magento.com/downloadable/customer/products>.

Chronopost Official **M2**

Confirm the different steps, ... Congratulations, your module is now installed and ready to be configured!

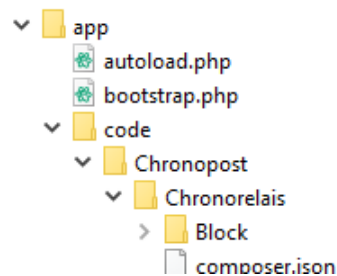

If errors are encountered during the installation related to your provider, this is because the provider does not comply with the pre-requisites of Magento. Contact your provider to get an update, or install the module manually.

Manual installation of the module

Now the module has been downloaded from marketplace.magento.com or www.chronopost.fr/fr/plateformes-e-commerce, we can start adding it to our Magento store.

Your Magento 2.x extensions can be installed in a matter of minutes by following these steps.

1. Download the extension
2. Using a client FTP, place the content of the module zip archive in the “code > Chronopost” directories of the app folder in the root directory of your site. Create the directories if required.

3. Connect to your Magento 2.x provider interface using the SSH connection (for further details, contact your service provider) or use software such as [Putty](#)
4. Once the SSH connection has been established, using the command (shell) invite, open the Magento root directory (where Magento 2.x is installed)
5. Enter the command “bin/magento module:enable Chronopost_Chronorelais” to activate the module. You should obtain the following result:

```
modulechzu-david@ssh02.cluster026.gra.hosting.ovh.net (php/7.1/production/stable) ~/www/magento2-demo2 $ bin/magento module:enable Chronopost_Chronorelais
The following modules have been enabled:
- Chronopost_Chronorelais

To make sure that the enabled modules are properly registered, run 'setup:upgrade'.
Cache cleared successfully.
Generated classes cleared successfully. Please run the 'setup:di:compile' command to generate classes.
Info: Some modules might require static view files to be cleared. To do this, run 'module:enable' with the --clear-static-content option to clear them.
```

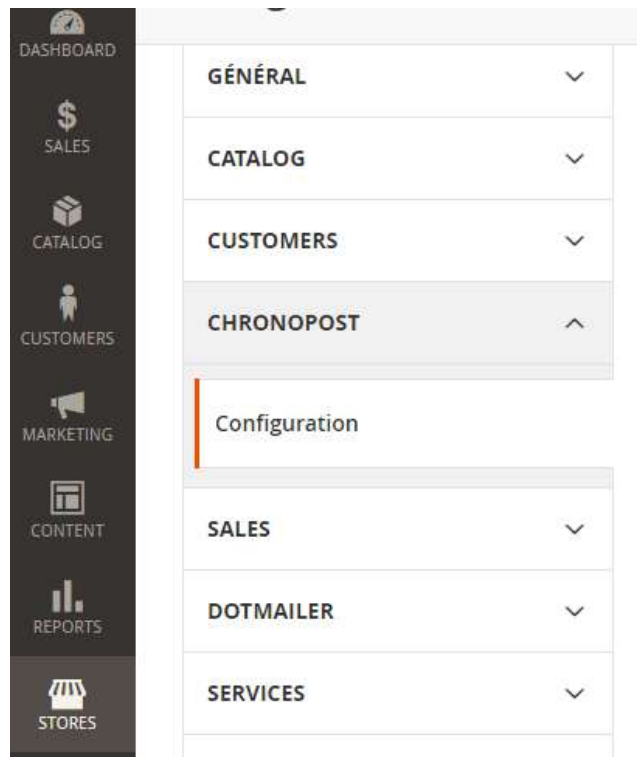

6. Then enter “bin/magento setup:upgrade” to update your Magento
7. Then enter “bin/magento cache:clean” puis “bin/magento cache:flush”

Your module is now installed and ready to be configured.

CONFIGURING THE MODULE

Now that the module is installed, it can be configured.

In the “Store > Configuration” menu of your back-office, click on the configuration button of the new “CHRONOPOST” menu.

Since version 1.1.3, the Chronopost module has been pre-configured with a test contract and fictitious addresses to allow specimen transport labels to be printed to test that the module is operating correctly as soon as it is installed.

The type of contract

Since version 2.0 of the module, a new option is present in the "general" tab of the "Chronopost" menu and allows you to indicate whether you benefit from one or more chronopost or ChronoFresh contracts.

This choice is important because it conditions the offers that you can activate and the overall functioning of the module.

The Chronopost contract

The Chronopost module is configured by default with a test contract, this data needs to be replaced by the identifiers of your own contract.

Contracts

The screenshot shows a form titled "Manage my contracts" with a sub-label "[store view]". The form contains the following fields and buttons:

- Field 1: "Chronopost contract name :" with the value "Contrat 19869502".
- Field 2: "N° de compte Chronopost :" with the value "19869502".
- Field 3: "N° de sous compte :" (empty).
- Field 4: "Mot de passe Chronopost :" with the value "255562".
- Button 5: "Check contract".
- Button 6: "Add contract".

- 1 You may now use as many contracts simultaneously as you wish. This field allows you to name each one so that you can identify them more easily.

- 2 The Chronopost account number is your Chronopost contract number containing 8 figures. This field must be completed for the module to work.
- 3 The sub-account numbers are not compulsory but may be completed if you use them. They can be used to differentiate cost centres, and will be used when printing transport labels via the shipping Webservices.
- 4 Your Chronopost password is your Chronotrace code that was included in your welcome E-mail. It is linked to your contract number. The association of these two items allows our webservices to identify you, to consult the list of your offers and prices. It is compulsory and is composed of 6 figures. If you don't know what it is, ask your Chronopost contact or the technical hotline.
- 5 The “check contract” button enables you to check the validity of the identifiers entered.
- 6 The “add contract” button displays a new form that is identical to the first one, to allow you to add another contract, if you have more than one.
You may add as many contracts as you wish.

General settings

Google Map v3 API Key (module version less than 1.1.4)

Since version 1.1.4, to facilitate configuration, the Google Map API has been replaced by OpenStreetMap. If you are on a version higher than 1.1.3, you can ignore this part

To display the relay map on your site, you need to use an API Google Map key. If you have a valid key, enter it in the corresponding field. If not, to get you need to go to console.developers.google.com or developers.google.com/maps/documentation/ for more information.

It is not compulsory to display the Pickup point map for the Pickup point offer to operate correctly. By default, the distribution points will be shown on a list where the selection may be made.

The URL for tracking

This field contains the address of the page for tracking Chronopost parcels. It provides automatic access to the tracking of a parcel when a transport label number from your back office, your customer accounts or E-mails sent to them is clicked on.

You may modify this address freely to use another generic tracking tool, but we recommend that you leave it by default, to ensure optimal tracking by your customers.

By default, the URL links to the Chronopost tracking page in French, but you can modify this to one of the seven languages available.

| Tracking URL for different languages | |
|--------------------------------------|---|
| French | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=fr&listeNumerosLT={tracking_number} |
| English | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=en&listeNumerosLT={tracking_number} |
| Italian | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=it&listeNumerosLT={tracking_number} |
| Spanish | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=es&listeNumerosLT={tracking_number} |
| German | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=de&listeNumerosLT={tracking_number} |
| Portuguese | http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=pt&listeNumerosLT={tracking_number} |

| | |
|-------|---|
| Dutch | <code>http://www.chronopost.fr/tracking-no-cms/suivi-page?langue=nl&listeNumerosLT={tracking_number}</code> |
|-------|---|

GS path

This field is for access to the GS (Ghostscript) command. This is optional for the Chronopost module, but allows the shipment labels of several Chronopost orders to be generated simultaneously.

If it is not present and / or configured, the editing of orders will have to be done one by one.

Once, you can edit all the labels for your orders at once or on a case-by-case basis.

For more information on Ghostscript, go to: ghostscript.com.

Configuring CSS Export

The Chronopost module allows you to manage your shipments entirely from your store as well as with the tools provided with your Chronopost.fr account.

In this case, you will need to export and import with Chronopost.fr using the “file import” tool and select the Alaska/RDV format.

This section allows you to modify the parameters of your export files to suit the configuration of your Chronopost.fr account.

Configuring Imports

If you print your transport labels from Chronopost.fr, you can also import the list of the tracking numbers into Magento so that they can be automatically linked to your orders.

These configuration options allow you to parameter E-mails to be sent automatically to inform your customers that their orders have been shipped and supply them with the tracking information.

Printing information

You can configure 3 different addresses:

- Informing the sender of print-outs
- Informing the Chronopost customer of print-outs
- Return address

Then sender address is essential for the module to operate, this is what is used to define the delivery offers that the customer is eligible for and that allows the transport labels to be printed.

The sender address is the place where your articles are shipped from. This is the address that features on the transport labels of your shipments.

The customer and return addresses are optional but may allow you to complete a billing address or After-sales returns etc. if they are not the same as the sender address.

The compulsory fields of the module are configured by default with fictitious addresses to permit you to check more rapidly that the module is working correctly, therefore you need to replace them with your own before opening your store.

To avoid forgetting to change a field, or if you do not wish to use one of the addresses, simply click on the “Clean information” button of the corresponding address.

Téléphone
[store view]
optionnelle

Mobile
[store view]
optionnelle

Printing parameters

The Chronopost module does not permit direct print outs, but generates a PDF file containing all of the transport labels to be printed.

It is this PDF file that must be printed.

There are 3 print format types:

- PDF laser with proof
- PDF laser without proof
- PDF thermal

If you use a standard office printer, select “PDF laser with proof” (with proof of deposit) or PDF laser without proof (without proof of deposit).

In general, the proof of deposit is not required for your shipments. It is only required for transport labels created for sender returns.

If you have a thermal printer provided by Chronopost, select the “PDF thermal” format.

- Print PDF Laser with proof: used to print the transport labels on A4 paper, with proof of deposit to be kept by the sender.
- Print PDF Laser without proof: used to print the transport labels on A4 paper, without proof of deposit.
- Print PDF thermal: used to print the transport labels on self-adhesive labels specially designed for thermal printers.

The use of a thermal printer requires a different configuration than for operation with Chronopost.fr. If you already have a printer that is not compatible but that you wish to use with your store, please contact a Chronopost technician.

Unit of weight

This parameter allows you to configure the Chronopost price calculations to suit the units of weight of your products. The options available are grams and kilograms.

Magento does not natively manage grams, but if the use of this unit of measurement is more relevant for your store (example, seed items weighing only a few grams per unit), nothing prevents you from entering the weight of your items in grams.

Simply configure the module appropriately so that it performs the conversion automatically when editing waybills. You will also find that the order management pages indicate "g" and no longer "kg".

Our Webservices interpret the weight in kilograms, therefore it is essential that the unit chosen is the same as that of your store, so that the module knows if it needs to make a conversion.

Mailbox deposit option

The mailbox option (BAL) authorises or not the deliverer to leave your parcels in the mailbox of the consignee if they are absent.

In order to use this option, you must first activate this service and have it in your Chroniopost contract.

Ad Valorem insurance

This option allows you to activate or deactivate insurance for your shipments.

You can also provide a minimum basket value above which the insurance is activated. For example only insuring shipments whose value is above 100 €.

Activer l'Ad Valorem
[store view]

Montant minimum à assurer
[store view]

If the basket fulfils the conditions, the shipment will be insured to the value of its initial price, excluding the shipping cost.

The cost of the insurance is not calculated and passed on by the module, if you wish to offset its cost, you need to apply a margin on the price of your articles or delivery charges.

Important: only single parcel shipments may be insured. The option is automatically deactivated if there are several parcels, as the value of the goods is not shared equally between the parcels.

Saturday delivery option

By default, all of the shipments made to France with the Chrono 10, 13 and 18 offers will be delivered from Monday to Friday.

This option allows you to request Saturday delivery in general pour for a shipment made on Friday or Thursday if the Friday is a bank holiday.

Option samedi activé du
[global]
 Date :

Au
[global]
 Date :

Since version 1.2.8 of the module, you can:

- Activate the option when editing the waybill, in which case the option is not visible to your customers and the cost cannot be borne by the customers benefiting from it.
- Show the option to your customers when ordering and set the price. The choice of option will then be made by the customer and the cost will be added to the shipping costs of the order. Please note, if you use this option you must be able to ship your packages on time. Chronopost cannot be held responsible for a package including the option, but delivered too late.

Setting the Saturday option when editing waybills

Set the option "Show option to customers" to no.

The additional cost is not used in this usage mode. The potentially entered value will therefore not be used.

Afficher l'option aux clients
[store view]

Non ▼

Si l'option est affichée aux clients, veuillez noter que vous êtes responsable des délais de traitement. Si elle ne l'est pas, le coût additionnel ne sera pas ajouté aux coûts de transport finaux. Définit la période où l'option sera affichée aux client (si l'option d'affichage est activée) ou la période où l'option sera automatiquement ajoutée à la lettre de transport.

Define the start and end days and times that you wish to apply for the "Saturday delivery" option to be made available. If the option is activated for the corresponding offer, it will be applied for the transport labels printed within the time range defined.

The cost of the Saturday delivery option is not automatically passed on to the delivery price offer. We are not aware of your handling times, if you wish to offset its cost, you need to apply a margin on the price of your articles or delivery charges.

The option is activated for the transport labels printed in the defined range and not according to the date of the order.

Setting of the Saturday option at the customer's choice

Set the option "Show option to customers" to yes.

The additional cost field allows you to enter the amount to add the shipping cost if the option selected by the customer.

00

Définit la période où l'option sera affichée aux client (si l'option d'affichage est activée) ou la période où l'option sera automatiquement ajoutée à la lettre de transport.

Define the start and end days and times for which you want the "Saturday delivery" option to be displayed on the order path. If the option is active for the corresponding offer, then it will be offered to customers and its cost indicated.

Activating the option of customer choice requires that you be able to ship orders with the option on time. Chronopost cannot be held responsible for if the taking charge of the order is too late to allow delivery on Saturday.

Return option

An option that allows you to create and send automatically a transport label to a customer to allow them to return an item. If your return address is different from your shipping address, this

is where you can select the one that will be used by default. Please note that you can change this when you print the label.

Since version 1.1.3 of the Chronopost module, this option has been extended to the Chrono Classic, Express and Relais Europe offers as well as for the national offers for the eligible European countries.

List of eligible countries

| | | |
|---------|------------|----------------|
| Germany | Estonia | Holland |
| Austria | Finland | Portugal |
| Belgium | Latvia | Sweden |
| Denmark | Lithuania | Switzerland |
| Spain | Luxembourg | United-Kingdom |

Configuration des tarifs (Supplément pour la corse)

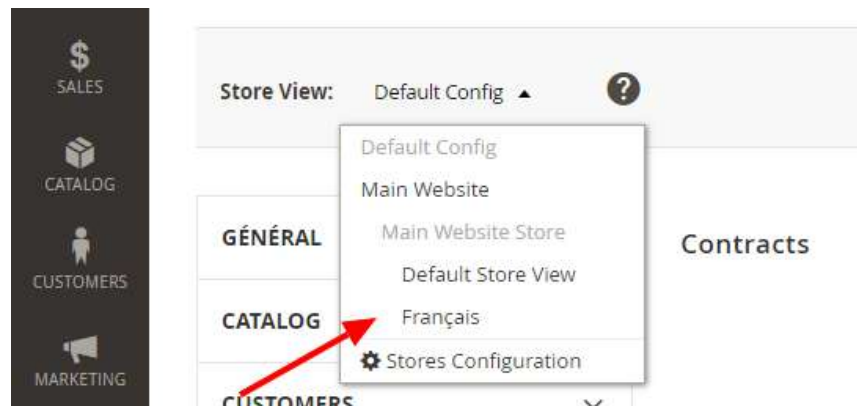

Since version 1.1.4 of the Chronopost module, you have the possibility to define an amount to add to the shipping cost to Corsica, whether you have set your price schedules manually or that you use the Quickcost and for all transport offers Chronopost eligible.

Map information text

The Pickup relays are displayed on a map. By default, the information on this map are in French.

If you have a multi-language site, you can now translate the information (days, opening times,...) on the relays for each of the languages of your store. Select the other languages in the “Store view” menu.

Select the language that you wish to translate in the “store view” menu in the top left corner of your back-office.

Then go to the “Map information text” section on the Chronopost module configuration page to make the modifications.

Relay point display configuration

Version 1.2.8 of the Chronopost module adds a new option "Display mode for relay points".

This function allows you to include or not the Chronopost automatic lockers. Since the dimensions of the lockers are limited, this can be used if your shipments are large.

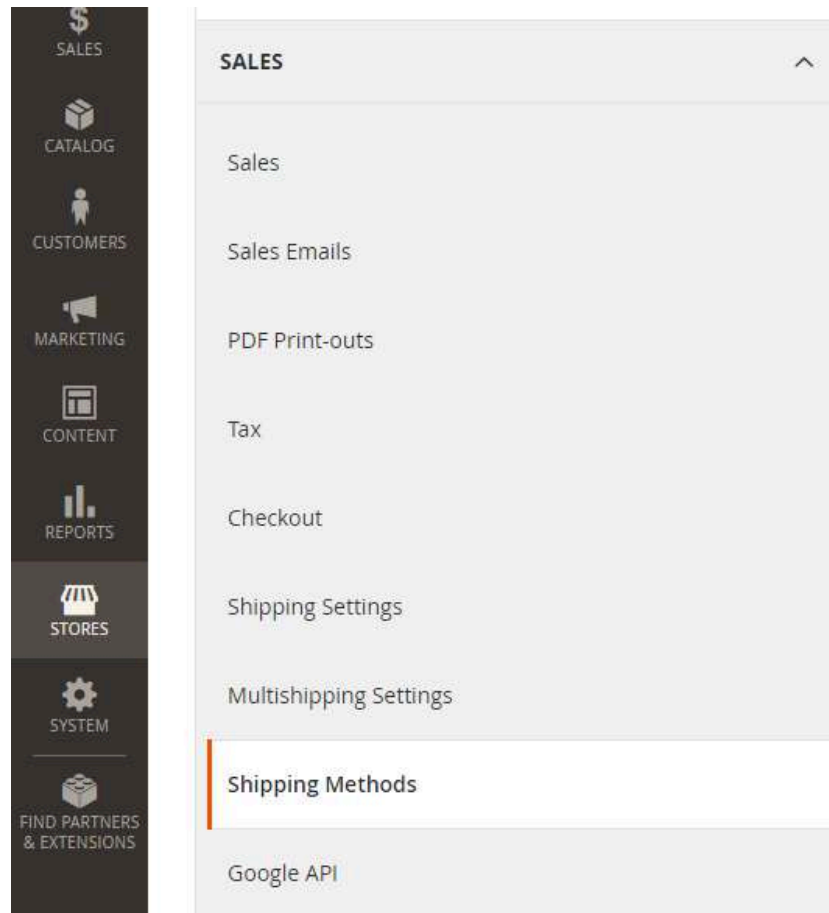

Configuring the use-by date

If you are a Chronofresh customer, you must indicate the use-by date of the item with the closest for each shipment.

This date must be at least 3 days from the date of shipment. In order to avoid the systematic entry of this information, you have the option of setting a default date in the form of sending date + n days.

CONFIGURING THE TRANSPORT OFFERS

With the module duly configured, go to the “Configuration” sub-menu in the “STORES” menu, then select “Shipping Methods” from the “SALES” tab.

You can then access the list of all of the transport offers available for your store and can parameter, activate or deactivate those present on your contracts.

You can only activate the offers corresponding to your type of contract (Chronopost or Chronofresh)

The Chrono 10, 13 and 18 offers

Each Chronopost offer has various options that allow you to customise how they operate:

- Activated (yes/no): allows you to activate or deactivate the display of the offer on the front-office of your store.
- Title: displayed in the order manager and when your customers place orders, it allows you to identify the logistics provider easily.
- Default Contract: this is the contract that will be associated to the offer in the purchasing process. If you use the QuickCost function, it is the prices of this contract that will be used.

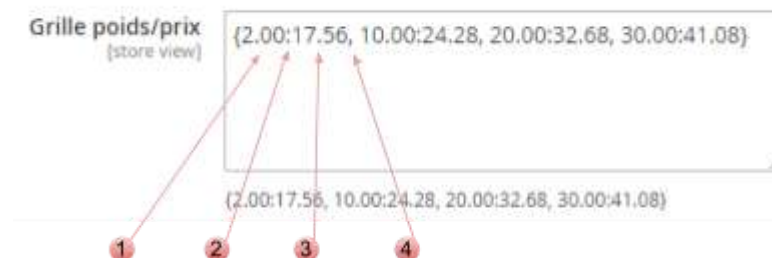

If an offer is available on several of your contracts, you can always modify this when you print the transport label.

- Delivery method: this is the name of the transport offer as displayed to your customers.
- Weight limit: this is the maximum weight of a basket for which the offer is available.

The limit is 30 kg for standard offers and 20 kg for Pickup point offers. If you are not selling any items whose weight is above these limits, the multi-parcel option frees you from this limit by breaking the order down into several parcels.

- Weight/price table: if you do not use the Quickcost function, you need to configure your price table manually. For versions of the module lower than 1.2.8, proceed as follows. Otherwise, refer to the chapter "Configuration of price lists".

- 1 This is the maximum weight for the category, in this case 2.00 kg, then for the previous category of 10 Kg...
The “.” are used to separate kilograms and grams.
- 2 The “;” show the end of the weight entered and the start of the price of the category.
- 3 Price of the corresponding category, 17.56 € for the 0 to 2 kg category, then 24.28 € for the 2 to 10 kg category...
You can create as many price categories as you wish without weight limits.
- 4 Each category must be separated by “;”.

The weight of the parcel used is that of the basket, so it is important that the product files of your items contain the correct information. Also remember to use a slightly higher margin to them to compensate the packed weight.

- Quickcost: the activation of the QuickCost function means that you do not need to complete your prices manually, by consulting and automatically applying those of your contract. If you activate it, the existing “Weight/price tables” will be ignored.

Important: Quickcost does not include the options and supplements, so you must remember to use the options to add a margin to the price to offset these costs (fuel supplement, insurance, Saturday delivery, etc.). Please note that the test contract does not allow the Quickcost function to be used.

- Value to be added to Quickcost: if you use QuickCost, enter here the value that you wish to add to the price indicated by the option. This value can be stated in € or %.

-
- Type of value to be added: define here if the value to be added previously entered is a fixed amount in € or a percentage to be applied to the delivery price.
 - Quickcost URL: this defines the access path to the Quickcost webservice, it must only be modified if requested by Chronopost.
 - Free delivery according to the amount: this is used to state if you wish to offer free delivery based on the basket value for the offer concerned.
 - Administrative cost: state here if you wish to apply a lump sum amount for administrative costs to the price of shipments made with this offer.
 - Handling charges: state here if you wish to apply a lump sum amount for handling charges to the price of shipments made with this offer.
 - Logo URL: when selecting the delivery module, the Chronopost logo will be displayed for each corresponding offer. You can modify this by placing another logo in the corresponding folder of your FTP and by stating its name here.
 - Debug: used to activate the debugging mode, mainly used by our support teams in the case of an incident.
 - Authorise for (Specific Countries / All Allowed Countries): the Chronopost module automatically checks the eligibility of the countries for each offer. By ticking the “Use system value” box or by selecting “All Allowed Countries”, the offer will be automatically proposed to all of the possible destinations.
If on the contrary, you wish to restrict the countries that are eligible for delivery, select the option “Specific countries”.
 - Authorise for specific countries: if you have already selected the option “Authorise for Specific country”, here you can select the countries for which the offer will be available.
To select several countries consecutively, hold down the  button.

You can select any country, however the eligible offers for the destination will be proposed when the order is made. Please ensure that the offers match the countries.

- Saturday delivery: you can propose the Saturday delivery offer independently for the Chrono 10, 13 and 18 offers. Its cost is not automatically applied to the orders, if you have activated it and wish to pass on its cost to your customers, you need to apply a margin to your delivery charges.

- Sort Order: this notion allows you to prioritise the order in which the offers are displayed by "weighting" them (1, 2, 3...). The offer weighted 1 will be displayed before the offer weighted 2 and so on.

All of the values are in Euros and exclude VAT, which is added when the order is placed depending on the location of the customer

The Chrono Classic and Express offers

The Chrono Classic and Chrono Express offers propose the same functions as the Chrono 10, 13 and 18 offers except for the Saturday delivery option which is not available for international deliveries.

The Chrono Relais, Relais Europe and Relais DOM offers

The Chrono Relais, Relais Europe and Relais DOM offers propose additional options linked to the Pickup point map.

- Display map: allows you to display the map showing the Pickup points close to the delivery address.
- Max. search radius: used to limit the zone in which the relays are displayed.

The rest of the options are identical to the Chrono 10, 13 and 18 offers except for the Saturday delivery option, which depends on the opening days of the relay selected.

The Chrono 2Shop offers

The Chrono 2Shop Direct is mostly similar to the Chrono Relais. The offer is eligible only for deliveries from France to France. Parcels are delivered in 2 to 3 days in the pickup point chosen. The Chrono 2Shop Europe is similar to Chrono Relais Europe. Parcels are delivered in 2 to 7 days in the pickup point chosen. For 2Shop Direct and Europe:

- Multiparcels : multiparcels(1/x) is not possible for the offer but multiple parcels(1/1) for an order is authorized.
- Assurance : ToShop parcels cannot have an assurance.
- Pickup point : the pickup points list does not include the Chronopost automatic lockers.

The rest of the options are respectively identical to the Chrono Relais and Chrono Relais Europe offers. These offers 2Shop Direct and Europe have a specific return offer 2Shop Retour and 2Shop Retour Europe.

The Chrono Sameday offer

The Chrono Sameday offer permits same day delivery of the customer's order, to check the conditions of eligibility for this offer refer to the page www.chronopost.fr/fr/livraison/nos-offres/chrono-sameday.

The Chrono Sameday offer has a “Deactivate after” option in addition to the ones it has in common with the Chrono 10, 13 and 18 offers, to allow you to define the cut-off time on your site for orders to be eligible for the offer. After this time, the offer will no longer be proposed to customers.

The Chrono Precise offer

Formerly called Chrono Rendez-vous, the Chrono Precise offer allows your customers to choose the date and time the delivery will be made.

The Chrono Precise offer now permits Sunday delivery between 9h00 and 13h00.

The Chrono Precise offer proposes special options allowing you to define the first delivery slot available to suit your logistics constraints.

- Parcel delivery date: defines the first delivery date possible after the order has been placed.

Date de remise des colis Jour de la commande + jour(s)

- First delivery slot available: allows you to define the date from which delivery slots will be proposed + 1 day.
For example, if you define a Tuesday at 13h, the first available delivery slot will be Wednesday 13h after the order has been placed.
To use this option the “parcel delivery date” must be set to “0”.

jour Heure :

Date à partir duquel le semainier de l'option RDV sera calculé

- Slots that must be closed: you can choose to close certain delivery slots if certain constraints do not allow you to guarantee that you can process your orders in time for them (days without collection, bank holidays, stocktaking...).
To close slots, click on “Add a slot” and define the start and end dates and times for closure.
To re-open closed slots, click on the  icon.
- Price level: historically, a supplement was applied to certain delivery slots with less activity. It was possible in this case to close the most expensive slots, or to apply the supplement. The slots depend on the delivery branches and therefore change for each consignee.
Chrono Precise is becoming more democratized and these options no longer apply, but are still present to avoid interfering with the configuration of those who were using it at that time.

“Price level” is no longer used, you don't need to worry about this function.

- Display prices: used to activate or deactivate the supplement cost for each slot on the weekly planner. If you do not use the price level, set the option to “no”.

The Chronofresh offer

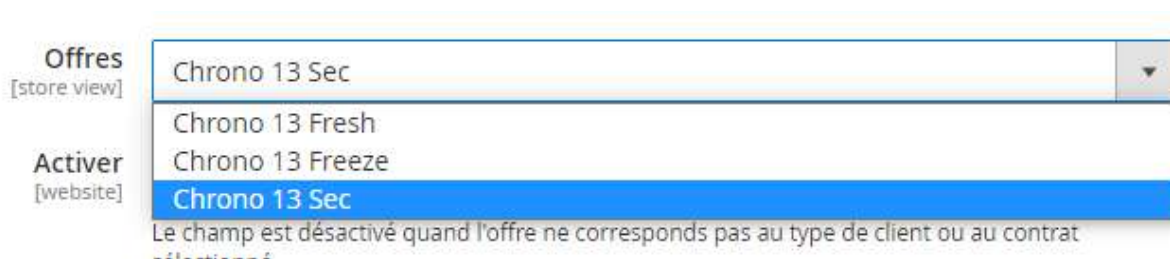

If you are a ChronoFresh customer, you can activate the corresponding offer. the latter differs from Chronopost offers, because it allows the shipment of orders:

- Temper 13
- Fresh 13
- Freeze 13

Unlike Chronopost offers, your customer's basket may contain items requiring several shipments depending on the packaging temperatures of the products.

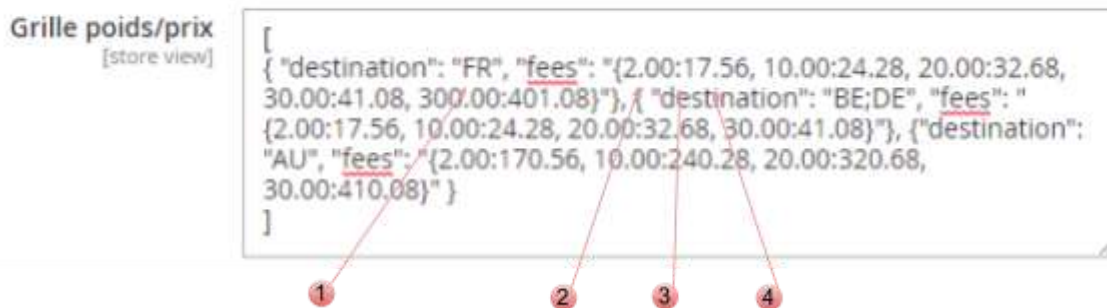

Your customer will therefore only be offered a Chronofresh offer regardless of the content of his basket. It's up to you to edit as many waybills per offer as needed.

The drop-down list indicates the offers available on your contracts and allows you to select the one that will be used by default for issuing waybills or calculating rates (if you are using quickcost).

Configuring Price Lists

Since version 1.2.8 of the chronopost module, you can configure the different price lists according to the countries of destination.

- 1 This is the maximum weight of the slice, here 2.00 kg, then of the previous slice at 10 kg ...
The "." allows to separate kilogram and gram.

-
- 2 The ";" allows to indicate the end of the entry of the weight and the beginning of that of the price of the slice.
 - 3 Price of the corresponding slice, 17.56 € for the 0 to 2 kg slice, then 24.28 € for the 2 to 10 kg slice...

You can create as many price bands without a weight limit.

- 4 Each slice must be delimited by a ";".

If you set up an international delivery offer and want to define different rates depending on the country, you must create as many groups {"destination": "Country codes", "fees": "{Max weight of the slice: band price}"} as needed, separate with commas.

For example for an identical grid for Belgium and Germany and different for Australia:

```
[  
  { "destination": "BE;DE", "fees": "{2.00:17.56, 10.00:24.28, 20.00:32.68, 30.00:41.08}" },  
  { "destination": "AU", "fees": "{2.00:31.56, 10.00:42.28, 20.00:53.68, 30.00:65.08} }  
]
```

If the country of destination does not have a set of grids, or if the weight of the basket is greater than the weight of the largest slice, the offer will not be offered when ordering.

DISPLAYING THE OFFERS IN THE ORDER TUNNEL

With your module installed and parameters set, your customers can access the Chronopost delivery offers.

The shipping address

The offers proposed to your customers depend on the destination address.

For example, for a national delivery, the Chrono 13 offer will be available for all customers, the Chrono 10 offer will not be accessible if the address is located too far away from the delivery branch.

For international deliveries, the Chrono Classic offer will only be available in nearby countries, the Chrono Express offer will be available in all cases (unless restricted in your module configuration).

Shipping method

The transport offer is selected in the “Shipping Methods” stage of the order tunnel.

The transport offers available are displayed as a list that shows them and their prices. The description of each offer visible to your customers can be modified on the offer configuration page.

Selecting the Chrono 10, 13, 18, Sameday, Classic or Express offers

For the Chrono 10, 13, 18, Sameday, Classic and Express, simply click to select the one you want.

Shipping Methods

- 24,28 €  Chronopost-Livraison express à domicile avant 13H Chronopost
-
- 24,28 €  Chronopost-Livraison express à domicile avant 10H Chronopost
-
- 24,28 €  Chronopost-Livraison express à domicile avant 18H Chronopost
-

Selection of the Saturday delivery option

If you have activated Saturday delivery at the customer's choice, the option will appear when selecting the transport offer.

-
- 32,68 €  Chronopost-Livraison express à domicile avant 13H Chronopost
-
- Ajouter l'option de livraison le samedi : (+4€)

Selecting Pickup Points offers

Selecting a Pickup point delivery offer displays a list of the 5 closest Pickup points to the address entered by the customer. Simply click on it to validate it.

If the customer wishes to have it delivered to another address, the Pickup point search area can be modified without this affecting the customer's invoice address.

Selecting the Chrono Precise offer

Selecting the Chrono Precise offer displays a weekly planner that allows the day and time to be selected for the delivery. The available slots depend on the Chronopost delivery branch, if you have closed some of them in your back-office, and for the Sunday slot, on your contract.

If you charge supplements on certain slots, the cost of each of them will be shown on the weekly planner.

Order detail page

You can then access a page that contains all of the information related to the order shipment, address, basket contains, etc.

Let's look now at the "Shipping information".

Shipping Information

Chronopost - Chronopost-Livraison express à domicile avant 13H

Total Shipping Charges: **24,28 €**

| Carrier | Titre | Number | Action |
|--|-------|--------|--------|
| <input type="button" value="Add Tracking Number"/> | | | |

Contrat :

Nombre de colis :

Weight and dimensions :

| Poids (KG) | Largeur | Hauteur | Longueur |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <input type="text" value="6"/> | <input type="text" value="1"/> | <input type="text" value="1"/> | <input type="text" value="1"/> |

Here is displayed the information on the transport offer, the tracking number(s) (if the order already has others), the contract associated to the transport offer, the number of parcels in the order, the weight and dimensions of the parcel(s).

Manually adding a tracking number

If for any reason you wish to add a tracking number manually to your shipment, click on “Add Tracking Number”, select the transport offer associated to the tracking number and add the information.

| Carrier | Titre | Number | Action |
|--|---|----------------------|---|
| <input type="text" value="Chronopost"/> | <input type="text" value="Chronopost"/> | <input type="text"/> |  |
| <input type="button" value="Add Tracking Number"/> | | | |

Selecting the contract

If you have used several contracts and a transport offer is available on several of them, you can choose to modify the contract and give it the default configuration at the last moment, before printing the transport labels.

Contrat :

Nombre :

You may modify the contract to be used for the transport label up until printing. Once the first transport label has been printed, you can no longer modify the contract. If you print others or if there is a return, everything will be linked to the first contract used for the first shipment.

Selection of the offer

If you are a ChronoFresh customer, you can modify the offer that will be used before each issue of the waybill, regardless of the number of shipments required for the order.

Contrat :

Date limite de consommation : 

The use-by date

The best before date must be indicated for all Fresh or Freeze shipments. It must be equal to that of the product with the closest expiry date for each package and cannot be less than 3 days after the date of dispatch.

The number of parcels in the shipment

If an order cannot be shipped in a single parcel, you can then indicate here the number of parcels required. This action will display as many lines for entering weights and dimensions as required.

Nombre de colis :

Weight and dimensions :

| Poids (KG) | Largeur | Hauteur | Longueur |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <input type="text" value="6"/> | <input type="text" value="1"/> | <input type="text" value="1"/> | <input type="text" value="1"/> |
| <input type="text" value="6"/> | <input type="text" value="1"/> | <input type="text" value="1"/> | <input type="text" value="1"/> |

You will then obtain as many transport labels as there are parcels in your shipment, all linked to one another, under 1/x parcels, 2/x parcels....

Example of a multi-parcel transport label

Entering the weight and dimensions of the parcels

The weight of the parcel is already filled in and estimated based on the weight of the items in the order.

If you are using the multi-parcel option, you then need to state the weight of each parcel according to the items they contain.

Maximum authorised weight

The maximum weight of a parcel depends on the offer. It is set at 30 kg per parcel for all of the offers proposed in the Chronopost module except for Pickup point delivery offers, which are limited to 20 kg per parcel.

If you enter a weight that is too heavy, a message will invite you to correct it when you come to print the transport labels.

The weight shown here will appear on the transport labels for each parcel and recorded as the declared weight. It is therefore essential they are entered.

Maximum authorised dimensions:

For the Chrono Relais offer, the maximum length per parcel is 100 cm. And the ratio of $L + 2H + 2W$ may not exceed 250.

For all of the other offers, the maximum length per parcel is 150 cm, and the ratio $L + 2H + 2W$ may not exceed 300.

If one of the dimensions or the ratio $L + 2H + 2W$ is above the maximum authorised values for a parcel, a message will invite you to correct the information entered and remind you of the rules to be respected.

The dimensions do not have to be entered, they are only used to check the conformity of your shipments to avoid applying supplements or having your shipment refused.

Weight and dimensions :

| Poids (KG) | Largeur | Hauteur | Longueur |
|------------|---------|---------|----------|
| 10 | 40 | 30 | 10 |
| 6 | 50 | 20 | 30 |

Table for entering the weights and dimensions

Modification of the insured value

If the insurance option is active and the reserve price is reached for the order, a field indicating the amount is displayed. You can leave the value of the basket or change the amount as you wish.

In the case of multi-parcels, the control will be automatically deactivated. multi-parcels shipments cannot be insured.

Printing the transport labels

When the information on your shipment has been completed, click on the “Submit Shipment” button.

Your transport labels are then created, and an E-mail is automatically sent to the customer, to advise of the shipment of the order and to provide the order tracking information.

Return to the order “Shipments” menu and click on “View”. You will then see the list of the tracking numbers related to the shipment.

Shipping and Tracking Information

[Track this shipment](#)

Chronopost - Chronopost-Livraison express à domicile avant 13H

Total Shipping Charges: **24,28 €**

| Carrier | Titre | Number | Action |
|------------|------------|-------------------------------|---|
| Chronopost | Chronopost | XU290033376FR |  |
| Chronopost | Chronopost | XU290033380FR |  |

Click on a transport label number to access the tracking information of the corresponding parcel, or on “Track this shipment” to follow all of the parcels of the shipment.

Mass printing the transport labels

Until version 1.1.5 of the Chronopost module, if you want to print your waybills at once, you must first generate them individually for each order.

Since version 1.2.8, it is no longer necessary to generate waybills before they are mass printed.

In your back-office “Sales” menu, click on one of the “Print labels” links to access the list of orders.

This screen centralises all of your orders and information that is useful for printing your transport labels, such as order numbers and dates, the number of items, the transport offer, the weight of the order, the tracking numbers (for orders that have already been shipped)...

It has the advantage of allowing you to print all of the transport labels of your orders simultaneously in a single PDF file to make the printing easier, and proposes additional options that are not available on the detail page of an order.

Customising the columns

Many different items of information can be displayed here and we will only look at those required for your shipping and logistics. You can consult all of the display options available and customise your display by clicking on the “Columns” button.

Printing the transport labels of an order

When the information on your shipment has all been entered, click on the **1** “Generated” button. This will generate the following actions:

- **2** The creation of the tracking numbers and them being associated to the order;
- **4** Activation of the goods return option (if available);
- Updating the order status;
- Notifying the customer of the shipment by E-mail;
- ...

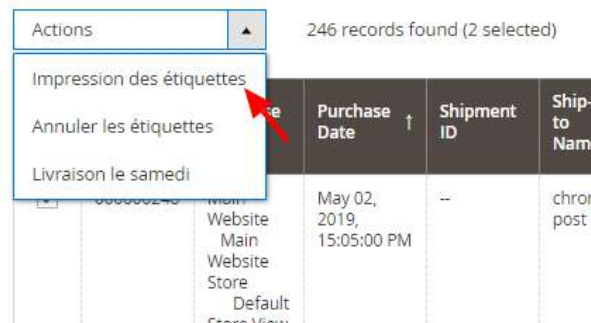

Generating transport labels for multiple orders

If your version of the module is lower than 1.2.8, generate your waybills, then check the boxes in the first column of the relevant orders table.

Since version 1.2.8 you can directly select the orders to edit without generating the waybills.

| <input type="checkbox"/> | ID | Purchase Point | Purchase Date ↑ | Shipment ID | Ship-to Name | Quantité total commandée | Tracking | Mode de livraison |
|-------------------------------------|-----------|--|---------------------------|-------------|--------------|--------------------------|----------|--|
| <input checked="" type="checkbox"/> | 000000248 | Main Website Main Website Store Default Store View | May 02, 2019, 15:05:00 PM | -- | chronopost | 6.0000 | -- | Chronopost - Chronopost Livraison express domicile avant 13H |
| <input checked="" type="checkbox"/> | 000000247 | Main Website Main Website Store Default Store View | May 02, 2019, 15:05:00 PM | -- | chronopost | 6.0000 | -- | Chronopost - Chronopost Livraison express domicile avant 13H |

Lastly, click on the “action” menu and choose the option “Print labels”

This action will create a PDF file containing all of the transport labels for the orders selected. You then simply need to start printing this file.

If there is no waybill for the order, they will be generated automatically. The generated file will contain all the waybills of the newly or previously generated selected orders.

Reprinting order transport labels

You can reprint a transport label that has already been generated, you have the choice of 2 methods:

In the “SALES” menu, “Print labels”, click on the “Print labels” column link for the order concerned, or tick the boxes of the first column of the table for the orders concerned, then click on the “action” menu and select the option “Print labels”

| Choose contract | Impression des étiquettes | Impression étiquette retour Adresse d'expédition | Action |
|------------------|---------------------------|---|----------------------|
| Contrat 19869502 | 000000263 | Retour SAV | View |

Printing transport labels

To print your transport labels, open the PDF file created and start printing on the printer that corresponds to your configuration, A4, or thermal.

Modifying the “Saturday delivery” option before printing

You can modify the Saturday delivery option for an order before creating the transport labels, to do so, select the orders to be modified in the “SALES” menu, then “Print labels”, then click on the action menu and select Saturday delivery.

The option will then be activated or deactivated for the offers concerned depending on their initial state.

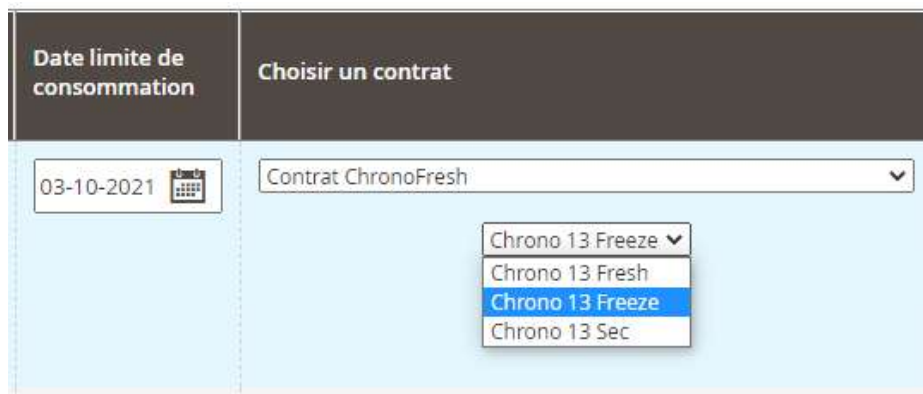

The Saturday delivery option is only available for Chrono 10, 13 and 18 offers and can only be activated if the shipping date is within the configured days / hours range.

Modification of the offer and the expiration date

If you are chronoFresh customers, you can modify the associated offer before each shipment and generate as many waybills as necessary.

You must also indicate the shorter use-by date of the shipment for the Fresh and Freeze offers. This date cannot be less than 3 days after shipment.

The screenshot shows a web interface with two main sections. The left section, titled "Date limite de consommation", contains a date input field with the value "03-10-2021" and a calendar icon. The right section, titled "Choisir un contrat", contains a dropdown menu with the selected option "Contrat ChronoFresh". A secondary dropdown menu is open, showing four options: "Chrono 13 Freeze" (selected), "Chrono 13 Fresh", "Chrono 13 Freeze", and "Chrono 13 Sec".

Sending a return transport label

The Chronopost module allows you to send a transport label to your customers automatically if they ask to return part or all of the order.

Simply click on the “After Sales return” link of the order. A message will confirm the transport label has been sent to the customer, displaying as the consignee the return address you have entered in the module configuration.

From version 1.2.8 of the module, if the return concerns an order in France, your customer will receive an e-label email. The latter, in addition to the waybill in PDF format, presents a QR code allowing you to drop off the parcel at the relay point or post office without having printed the waybill using your smartphone.

Vous n'avez pas d'imprimante ?

Rendez-vous directement dans un relais commerçant du réseau Pickup ou dans un bureau de poste équipé d'un automate d'affranchissement, avec votre colis **sans étiquette de transport** et suivez les étapes suivantes :

| Si vous déposez votre colis en relais Pickup | Si vous déposez votre colis en bureau de poste |
|---|--|
|  |  |
| <ol style="list-style-type: none"> 1 Rendez-vous dans un relais Pickup 2 Présentez ce QR code depuis votre smartphone  <p>En cas de non lisibilité, donnez le n° de réservation PZ370003090FR</p> <ol style="list-style-type: none"> 3 Noter le numéro de colis ci-dessus sur votre colis 4 Inscrivez votre numéro de portable sur l'étiquette qui sera apposée par le commerçant Pickup 5 Remettez votre colis et récupérez la preuve de dépôt | <ol style="list-style-type: none"> 1 Rendez-vous dans un bureau de poste équipé d'un automate d'affranchissement 2 Choisissez sur l'automate "Retrait Web Colissimo / Chronopost" 3 Saisissez le n° de réservation : PZ370003090FR 4 Validez et lancez l'impression 5 Collez l'étiquette et déposez le colis au guichet 6 Récupérez la preuve de dépôt |

It is not possible to identify the content of what is being returned, if the initial order had one or more parcels. Clicking on the "After Sales return" button only sends one transport label to your

customer with a zero weight. You will be charged for the actual weight weighed at the branch. To send several return labels, click as many times as required on the “After Sales return” link.

Since version 1.1.2 of the Chronopost module, this option has been extended to the Chrono Classic, Express, and Relais Europe offers as well as the national offers for the eligible European countries.

Reissue of a return consignment note

Module versions 1.2.8 and higher allow you to reissue or download a return slip. To do this, simply click on the tracking number of the return concerned.

Cancellation of a return consignment note

You can cancel a return waybill from version 1.2.8 of the module by clicking on the cancellation link of the return waybill.

To do this, simply click on the tracking number of the return concerned.

Please note, only waybills not collected by chronopost can be canceled. There is also a delay between its generation and its cancellation for our system to register it.

Modifying the return address

You are able to enter 3 different addresses in the configuration of the Chronopost module and to select one of them as the default return address.

However you may wish to use different addresses in certain cases (putting back into stock, repairs...).

To avoid modifying the configuration of the module every time, you can confirm the address to which the order is to be returned when the return label is sent.

Simply click on the drop-down list at the top of the "Print labels" column, then select the return address and create the transport labels.

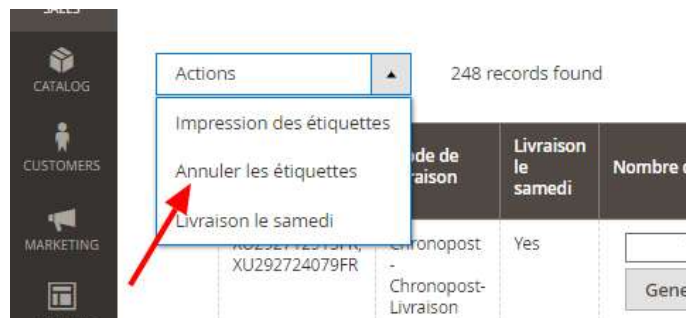

Returns are made on the contract used to ship the order, this cannot be modified.

Cancelling a transport label

In an order is cancelled, if there is an error in the weight of a parcel, a wrong contract... you can cancel the transport labels of an order so that they are not invoiced to you by the module, in addition to the third party tools you have available.

Select the orders for which you wish to cancel the transport labels, then click on the "action" menu and choose the option "Cancel labels".

A message will then inform you if the action has been carried out.

If successfully completed, the tracking numbers will be deleted and you will again be able to modify the contract used if transport labels are to be created again.

Once collection has been made, a transport label can no longer be cancelled.

Partial shipment of an order

If you are obliged to make several shipments to deliver the order to your customer, you can create the transport labels for the first shipment using the usual procedure and by adding new shipments as follows for the next one. The additional transport labels will then be added to the order and the shipment. The PDF file containing the transport labels will then contain those of the parcels already shipped and the new ones.

Special case

Magento proposes a native function for the partial shipment of an order from the details page of an order, by specifying which items are contained in each shipment.

If you choose this method, Magento will create a different shipment for each shipment of the order.

The transport labels of each order may then be printed independently for each shipment from the "Print labels" page ¹ of the "SALES" menu.

If you wish to add transport labels to an order that has already been shipped in the "traditional" way, or because all of the items should already have been sent, you must then choose a shipment to which you then attach the new transport labels ².

Once the first shipment has been made, the contract cannot be modified for the rest of the order..

Order statuses

The Chronopost module automatically manages the status "Delivered by Chronopost" when a parcel event equivalent to "Delivered" is found in the tracking history. A task runs every hour to review orders from the last 30 days and update their status accordingly.

Exporting orders to Chronopost.fr

If you manage your orders with Chronopost.fr you can easily export the list of your orders using the "SALES > Export" menus.

Select the orders that you wish to export and click on "Actions" then "Export CSS Format".

The end of day slip provides a summary in a single document of all of the Chronopost shipments. Simply tick the lines that you are interested in and then select the action "Print the slip". You will then obtain a pdf document that lists all of the shipments selected.

Do not forget to print two copies of the slip, one is handed over at collection or delivery, the other is to be conserved. Both copies must be signed.

The slip that is created will list the parcels collected by the Chronopost driver, the associated offer and the contract used for each shipment.

COMPATIBILITY WITH MODULES AND TEMPLATE

The Chronopost module is designed to be compatible with Magento native check out systems and to be integrated into the standard template, however we cannot guarantee the integration and correct operation with all existing templates and modules.

CUSTOMISING THE MODULE

The Chronopost module is free therefore you are able to modify it as you wish.

Chronopost cannot be held responsible for any technical problems if you make a modification to the module.

Any modifications made to the module will end the eligibility to our technical support and to updates to the module as this risks overriding the modifications made.

TECHNICAL ASSISTANCE

For all technical support requirements, please contact the Chronopost service centre on the number below. Our technicians will make every effort to provide you with a quick and efficient solution.
